Stability and Convergence of Mechanical Systems with Unilateral Constraints (Lecture Notes in Applied and Computational Mechanics) Remco Leine, Nathan van de Wouw

While the stability theory for systems with bilateral constraints is a well-established field, this monograph represents a systematic study of mechanical systems with unilateral constraints, such as unilateral contact, impact and friction. Such unilateral constraints give rise to non-smooth dynamical models for which stability theory is developed in this work. The book will be of interest to those working in the field of non-smooth mechanics and dynamics.
