Classical and Computational Solid Mechanics (Advanced Series in Engineering Science) Y. C. Fung, Pin Tong

Written for engineers and engineering scientists, this book gives first priority to the formulation of problems, presenting the classical results as the gold standard, and the numerical approach as a tool for obtaining solutions. The classical part is a revision of the text "Foundations of Solid Mechanics", with a much-expanded discussion on the theories of plasticity and large elastic deformation with finite strains. The computational part is all new and aims to solve major linear and nonlinear boundary-value problems.
