## **Young Tableaux: With Applications to Representation Theory and Geometry (London Mathematical Society Student Texts)** William Fulton

This book develops the combinatorics of Young tableaux and shows them in action in the algebra of symmetric functions, representations of the symmetric and general linear groups, and the geometry of flag varieties. The first part of the book is a self-contained presentation of the basic combinatorics of Young tableaux, including the remarkable constructions of "bumping" and "sliding", and several interesting correspondences. In Part II the author uses these results to study representations with geometry on Grassmannians and flag manifolds, including their Schubert subvarieties, and the related Schubert polynomials. Much of this material has never before appeared in book form. There are numerous exercises throughout, with hints and answers provided. Researchers in representation theory and algebraic geometry as well as in combinatorics will find this book interesting and useful, while students will find the intuitive presentation easy to follow.

### **From reader reviews:**

#### **Kevin Jakubowski:**

The particular book *Young Tableaux: With Applications to Representation Theory and Geometry* (London Mathematical Society Student Texts) has a lot details on it. So when you make sure to read this book you can get a lot of gain. The book was compiled by the very famous author. The writer makes some research just before write this book. This particular book very easy to read you will get the point easily after reading this article book.

#### **Linda Monge:**

Reading can called brain hangout, why? Because if you find yourself reading a book particularly book entitled *Young Tableaux: With Applications to Representation Theory and Geometry* (London Mathematical Society Student Texts) your brain will drift away trough every dimension, wandering in most aspect that maybe unidentified for but surely can become your mind friends. Imaging each and every word written in a reserve then become one contact form conclusion and explanation that will maybe you never get just before. The *Young Tableaux: With Applications to Representation Theory and Geometry* (London Mathematical Society Student Texts) giving you an additional experience more than blown away your brain but also giving you useful facts for your better life with this era. So now let us present to you the relaxing pattern at this point is your body and mind is going to be pleased when you are finished reading through it, like winning a sport. Do you want to try this extraordinary spending spare time activity?

#### **Henry Howell:**

Don't be worry for anyone who is afraid that this book may filled the space in your house, you will get it in e-book means, more simple and reachable. This particular *Young Tableaux: With Applications to Representation Theory and Geometry* (London Mathematical Society Student Texts) can give you a lot of buddies because by you considering this one book you have issue that they don't and make an individual more like an interesting person. That book can be one of a step for you to get success. This guide offer you information that probably your friend doesn't understand, by knowing more than other make you to be great people. So , why hesitate? Let me have *Young Tableaux: With Applications to Representation Theory and Geometry* (London Mathematical Society Student Texts).

#### **Timothy Rhine:**

What is your hobby? Have you heard which question when you got students? We believe that that query was given by teacher on their students. Many kinds of hobby, Every person has different hobby. And you know that little person including reading or as looking at become their hobby. You have to know that reading is very important in addition to book as to be the issue. Book is important thing to include you knowledge, except your own teacher or lecturer. You see good news or update concerning something by book. Many kinds of books that can you go onto be your object. One of them is actually *Young Tableaux: With*

Applications to Representation Theory and Geometry (London Mathematical Society Student Texts).
